

Anirudh Saxena

📍 Sri Ganganagar, Rajasthan ✉️ asaxena2.be23@thapar.edu 📞 +91 8690031891 🌐 github.com/anirudh1215

Full-stack engineer with hands-on Python, SQL/PostgreSQL, and cloud experience, plus applied machine learning. Builds data-driven, edge-rendered applications on Supabase and Cloudflare.

Education

Thapar Institute of Engineering and Technology, Patiala

B.E. Electronics & Communication, 2027

CGPA: 8.07/10

Academic Scores: Class 12 – 94.2% (Tiny Tots Public School); Class 10 – 97% (Nosegay Public School)

Technical Skills

Languages: Python, SQL, JavaScript, TypeScript, C++, Dart, HTML, CSS

Databases: PostgreSQL (queries, RPCs, data modeling, RLS), Supabase, Firebase

Backend: Node.js, Cloudflare Workers, REST APIs, OAuth

Frontend: React, Next.js, Nuxt 4, Vue 3, Flutter, Tailwind CSS, Pinia

Cloud & DevOps: Cloudflare Workers/R2 (SSR, CDN), Vercel, Git/GitHub, Wrangler CLI, Linux/Unix command line

AI/ML: CNN image classification (TensorFlow/Keras), data augmentation, model evaluation (precision/recall/F1, confusion matrix); coursework in Machine Learning and Computer Vision

Coursework: Data Structures & Algorithms, Machine Learning, Image Processing & Computer Vision, Database Management Systems

Experience

MuShark — *Software Developer*

Jul 2025 – Present

- Architected a multi-tenant SaaS platform on a modular Nuxt 4 architecture with SSR edge rendering on Cloudflare Workers, cutting initial page-load times.
- Engineered a data and media pipeline on Cloudflare R2 with CDN caching, automating release-data sync across Spotify, Apple Music, and YouTube via REST APIs and OAuth.
- Built a Supabase/PostgreSQL backend with SQL Row-Level Security, relational data modeling, and real-time state via Pinia for secure multi-tenant access.

Femme Rootz (NGO) 🌐 — *Web Development Intern*

Feb 2026 – Mar 2026

- Built the official NGO website with Nuxt and Vue SSR, working with non-technical stakeholders to turn requirements into a working product.
- Improved organic discoverability through SEO, Open Graph metadata, and structured navigation to grow volunteer engagement.

Wealth Wave Capital Group 🌐 — *Software Engineering Intern*

Jun 2025 – Jul 2025

- Built a mobile-first Investor Portal with React and Next.js for portfolio tracking, deployed on Vercel.
 - Implemented secure financial dashboards on PostgreSQL and Supabase Auth with role-based access control and SQL queries for sensitive investor data.
-

Projects

Akasaki — **GST Invoicing & Inventory Web App**

Next.js, TypeScript, Supabase/PostgreSQL

- Built a production GST invoicing platform for a telecom retailer with per-IMEI inventory tracking, GST-compliant tax invoices (CGST/SGST/HSN), and in-browser PDF export, replacing a manual paper workflow.
- Designed atomic PostgreSQL RPCs with row-level security for invoice creation and dual cash/online numbering, enforcing payment and stock-state invariants at the database layer.

Plant Leaf Disease Detection — **CNN Image Classifier**

Python, TensorFlow/Keras

- Trained a custom 3-layer CNN (TensorFlow/Keras) on 12,206 PlantVillage images across 10 classes, reaching **90.33%** test accuracy and 0.90 macro F1; used dropout, augmentation, early stopping, and LR scheduling against overfitting.
- Evaluated via a 10×10 confusion matrix and per-class precision/recall, benchmarking against HOG+SVM and MobileNetV2 transfer-learning baselines.

GrowSphere — **IoT Monitoring App**

Flutter, Supabase

- Built an IoT monitoring system for temperature/humidity with a Flutter dashboard (real-time charts, threshold alerts), modeling time-series sensor data in PostgreSQL.
-

Leadership & Activities

- **Executive Board, MarkFin Society** — Led strategic planning, flagship events, and industry collaborations.
- **Admin, “Student Internships” Group** — Manage a community of **100,000+** members connecting students with internship opportunities.
- **Achievements:** District Table Tennis Champion (2018–19); District-level Badminton (2019–20); 3rd Place — ASSTEX Paper Trading.
